# **HEATMASTER TC EVO WATERMASTER EVO WATERMASTER X EVO**

**TOTAL CONDENSING GAS BOILER & GAS WATER HEATER**

# HEATMASTER TC EVO

## A UNIQUE CONCEPT

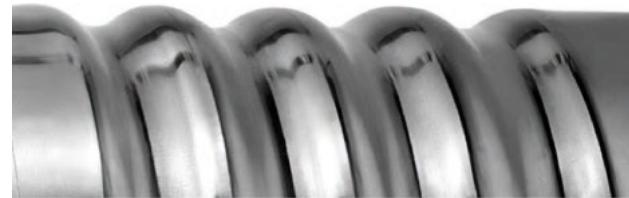

### STAINLESS STEEL

The heart of the HeatMaster consists of an exclusive stainless steel heat exchanger. The combustion gases flow downward along the exchanger pipes and condense in the lower primary circuit of the HeatMaster using all the combustion energy.

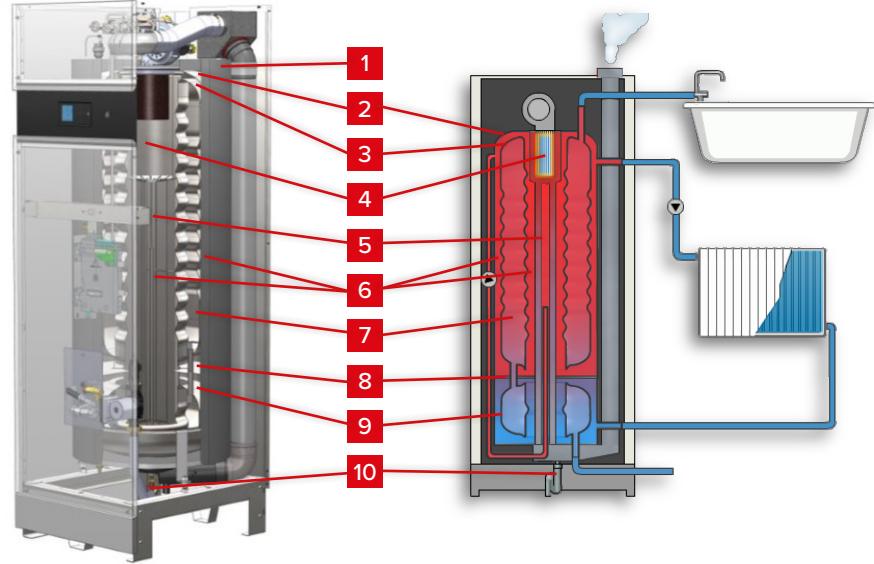

### TANK-IN-TANK

Around the HeatMaster' heat exchanger is a stainless steel hot water tank, through which the combustion gas pipes pass. This tank is placed inside a steel tank which contains the primary liquid. This primary liquid cools the combustion space and descends along the combustion ducts while directly heating the stainless steel tank which contains the domestic hot water.

- 1 50 mm insulation
- 2 Tank in Tank : Primary external tank
- 3 Tank in Tank : Sanitary tank (SST)
- 4 Combustion chamber
- 5 Heat Exchanger (SST)
- 6 Primary water
- 7 Sanitary water
- 8 Primary water separation plate
- 9 Preheat sanitary Tank
- 10 Condensate water

### HIGH DOMESTIC HOT WATER FLOW

With a same DHW volume, the unique Tank in Tank concept results in a much higher DHW production than other technologies. This also allows to select a less powerful model for a similar DHW performance, than with other technologies. The tanks' large heat exchange surface (up to 2X larger than a coil) allows for continuous heating of the tank in tank, without on-off cycles (tank recharging), further reducing for gas consumption and polluting emissions. In addition, the primary hot water surrounding the DHW tank has a thermal inertia which quickly exchanges its heat to the cold city water.

## DOUBLE CONDENSING IN HEATING & DHW

The vast majority of modern boilers only condens when cold city water enters the boiler cooling the exhausting combustion flues. This means, if there is no sanitary demand, there is no cold water entering the boiler and thus no condensing. The flue temperature is higher and the installation wastes valuable energy escaping with the flue. Thanks to the Tank in Tank technology, our HeatMaster TC® range do not have this limitation, the boilers condens in both heating and sanitary demand.

## EASY DISASSEMBLY

For easy maintenance, access and commissioning, the product is easy to disassemble. Within a minimum time and little manipulations, the front side, upper and lower casing can be removed.

## SELF-CLEANING EXCHANGER

The condensed water droplets appearing in the stainless steel exchanger clean it from all impurities, reducing the need for cleaning and increasing its lifetime.

## LOW SCALING

The exclusive design of the DHW tank allows it to slightly change shape under pressure and temperature variations, which prevents the build up of scale. Thanks to this auto-descaling, the efficiency and the DHW performance of the boiler remains through the life of the appliance.

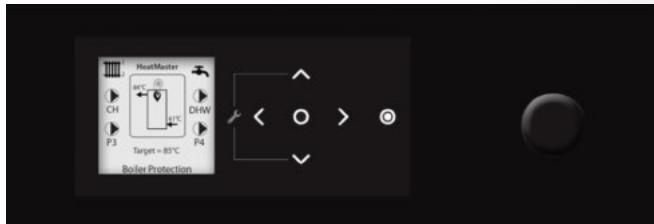

## ANTI-LEGIONELLA

The Tank-in-Tank technology guarantees all water in the tank can be heated at 60 °C, eliminating risks of legionella. An anti-legionella mode is also include in the boiler software.

## USER FRIENDLY INTERFACE

With its dedicated, intuitive & complete software, the boiler can run up to 2 separates heating circuits.

## SMALL FOOTPRINT

Up to 7240 L/h (40°C) domestic hot water per m<sup>2</sup>.

HM / WM (25 -35 -45) = 0,4m<sup>2</sup>  
HM/ WM (70-85-120) = 0,5 m<sup>2</sup>  
WM (25 X -45 X -70 X) = 0,8 m<sup>2</sup>

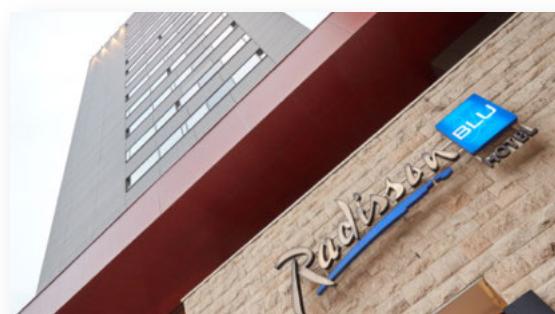

## APPLICATIONS & KEY ARGUMENTS

### TIP

Thanks to the Tank in Tank technology, a hydraulic separation with a balance tank or a plate exchange is not necessary for cascade configurations. Unlike other technologies, the HM TC does not require a minimum hydraulic flow.

## PROUD CUSTOMERS

### RADISSON HASSELT

Hotel | Belgium

5 Heatmaster 120 TC

### KA GENT

Football Stadium | Belgium

2 Heatmaster 120 TC

### AUTO AQUAPARK WŁOCŁAWEK

Carwash | Poland

1 Heatmaster 120 TC

## WaterMaster

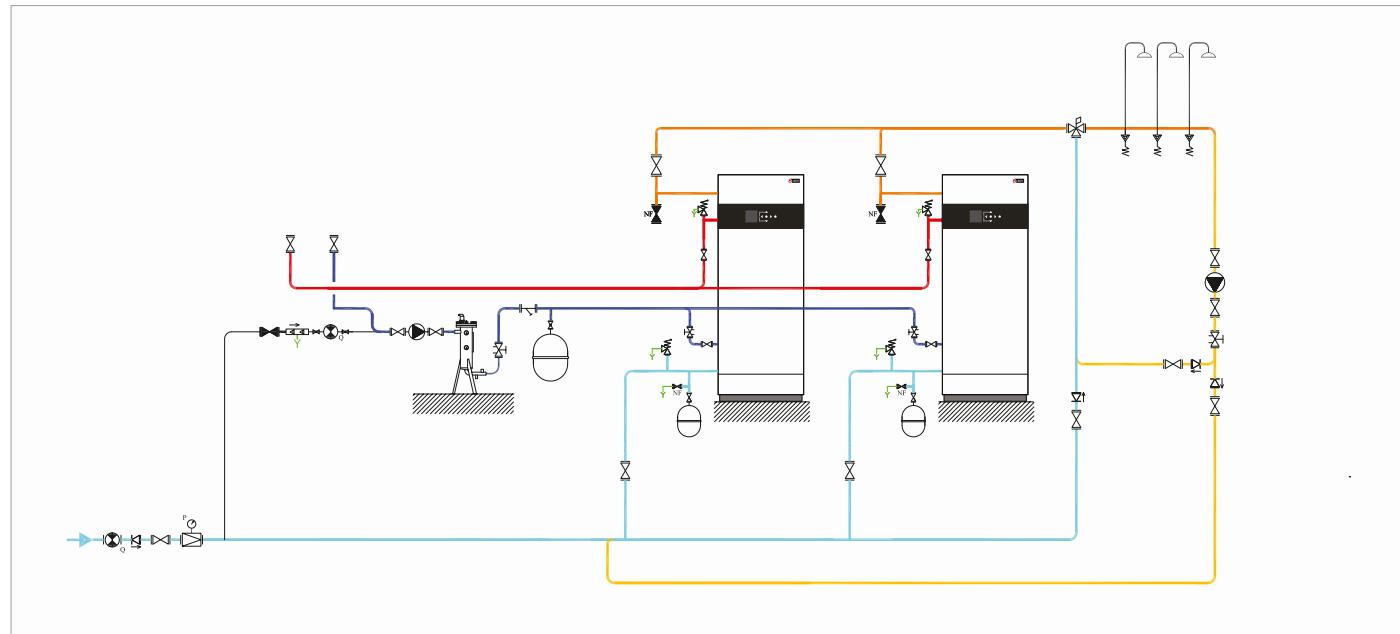

### A DEDICATED WATER HEATER

Developed to produce a huge quantity of sanitary water and certified as a gas-fired storage water-heater (EN89 : 2015), the range has been extended with three X models : A big eXtreme tank-in-tank equipped with a 25, 45 or 69,9 kW burner. The X models are standard equipped with a sanitary loop connection. The perfect solution for high sanitary hot water applications.
